Collapsing in Specimen Creek

Specimen Creek
Southern Gallatin
2/9/2019
Code
SS
Notes

From e-mail: " Large collapses on any slope with HS of <1m, one pit at 7500 on W aspect and 19 degrees HS 100 cm, yielded ECTP22 sudden collapse on advanced depth hoar 45cm from the ground. Overall just terrible structure. We had collapsing on both E and W aspects. Large shooting cracks. No other avalanche activity apart from large slide on Ernest Miller from several days ago."

Number of slides
1
Number caught
0
Number buried
0
Avalanche Type
Soft slab avalanche
Slab Thickness units
centimeters
Single / Multiple / Red Flag
Single Avalanche
Advisory Year
18-19
