Avalanche debris and crowns On blackmore

Date
Sat, 01/28/2023 - 15:05
Activity
Skiing

There were numerous debris piles, point releases, and crowns on the north face of Elephant and the northeast face of Blackmore this morning. Most of them appeared to have run during the storm (1/27) and had been covered by at least 6 inches of new snow.

Region
Northern Gallatin
Location (from list)
Mt Blackmore
Observer Name
Shawn Regnerus
