Natural Avalanche, Mount Bole Basin

Date
Mon, 02/27/2023 - 17:35
Activity
Ice Climbing

From IG. “I spotted a large crown this morning on the E face of Bole. The crown appeared to be pretty deep, at least a few feet, and propagated quite wide. It also looked like there was a debris path coming down the apron of the E face of Hyalite peak, but I was too far away to know for sure.”

Region
Northern Gallatin
Location (from list)
Mt. Bole
Observer Name
Nick Sramek
