Skier triggered near Bradley's meadow

Bradley Meadow Bridger Range 1/26/2019 Code SS-ASu-R3-D1.5-S Elevation 7200 Aspect SE Latitude 45.82950 Longitude -110.92700 Notes

A skier triggered this <u>slide</u> around two o'clock in Bradley's Meadow on 1/26. From e-mail: "The snow propagated when I made my first turn on a convex roll above the slope skiers right of the main meadow, just before the flat area before going up The Ramp. The <u>slab</u> broke right under my feet and propagated 20-25 feet on either side of me. The crown was 7" deep where I triggered it but some spots of it were as deep as 13". My friends and I decided that the <u>slide</u> was R3 and D1-D2. Luckily I was able to ski out of the <u>slide</u> right when it propagated so no one was caught in it."
