

Ross Peak

Date

Sat, 02/06/2021 - 20:57

Activity

Skiing

Did several laps on eastern flanks of Ross Peak.

Observations for 6600' to 8300', E and NE aspects:

- Saw several natural dry loose avalanches (D1) on upper NE face of Ross
- No slab avalanches observed
- Observed at least two dozen whumphs (mostly small and localized) while skinning
- no cracking
- winds were steady moderate in the afternoon, lots of blowing and drifting snow observed; winds primarily from W but also NW and N
- average ski pen around 30 cm

Region

Bridger Range

Location (from list)

Ross Peak

Observer Name

Alexis Alloway
