

Avalanche on Mineral Mountain

Date

Fri, 03/04/2022 - 11:40

An avalanche ran on The NE face of Mineral Mountain. Debris ran approximately 1600'. I couldn't get good enough eyes to see the trigger type but there was a possible ski track near the flank on mid slope. but I couldn't confirm. Debris looked frozen this morning and it likely occurred as a wet slab on 3/3/22

Region

Cooke City

Location (from list)

Mineral Mountain
