

Bear Basin old natural avalanche

Date

Sat, 04/16/2022 - 13:30

Activity

Skiing

We found two past avalanches on an E facing slope at 8400' near the bottom of Bear Basin after skiing of the Beehive/bear ridge. They appeared to be wet slabs that broke on the ground naturally during the warmup. ~100' wide with 3-4' crowns. Photos show new snow covering the paths and debris piles that could have buried a car. No signals in the debris.

Region

Northern Madison

Location (from list)

Bear Basin

Observer Name

Alden Sonnenfeldt
