Surface hoar slide

Hebgen Lake Lionhead Range 1/15/2023 Code SS-AS-R1-D1.5-O Elevation 9000 Aspect NW Latitude 44.82560 Longitude -111.31100 Notes

From Obs: "<u>Ski cut</u> sent a <u>slide</u> that failed on the known-to-be-reactive buried <u>surface hoar</u> layer . Avalanche broke around 12-14" deep, 100' wide and ran around 100 yards. It was extremely sensitive. We had skied a similar angle/<u>aspect</u> slope earlier and didn't get any reactivity. Occurred around 9000' on NW slope.~ 32 degrees. We did this 2 times on what we thought to be low angle slopes. ended up skiing down a low angle ridge line. The buried hoar isn't everywhere but it's touchy when found."
