

Warm Temperatures, Wet Snow in Hyalite

Date

Sun, 04/09/2023 - 13:15

Activity

Skiing

We toured in Hyalite today. By 10:30 in the morning we saw wet, natural avalanches coming down east facing cliffs. We also saw several pinwheels from yesterday. By noon we were at 9,900' on a SE facing [aspect](#), and the snow surface was wet at this altitude. Once we were down at 9,000' the top 8" of snow was wet, and it was beginning to move as a [slab](#) on small rollovers.

Region

Northern Gallatin

Location (from list)

Flanders Creek

Observer Name

Dave Zinn, Alex Haddad
