Activity

Skiing

We skinned up the shoulder just south of the Bacon Rind skillet, through the upper meadows to the top of the Skillet and descended a similar route.

On our ascent we got no cracking or collapsing, but we did get some big collapses while we were descending through the trees in the bottom 1/3 of the ski run. We dug on SE and NE aspects in the upper meadows at around 8600 ft. ECTPs in the 20s on the [surface hoar](#) at the top of the December facets.

The skillet slid sometime recently. Based on the snow on top I'm guessing Thursday-Friday last week (Feb 15-16th), but it could have happened up to a week earlier. Broke ~2 ft deep, 150 ft wide, and it was hard to tell how far it ran, but I'm estimating 200 vertical feet.

We stuck to our conservative plan and enjoyed great low angle powder skiing and then bushwacking back to the car.

Region

Southern Madison

Location (from list)

Bacon Rind

Observer Name
