

Weak snowpack at Lionhead

Date

Fri, 12/27/2024 - 07:05

We rode to Ski Hill then around and up onto Lionhead Ridge. We found buried [surface hoar](#) in both locations, 1-1.5' deep, with soft sugary facets below. Along the ridge we had two small, but audible collapses, when we walked from our sleds to a [snowpit](#). We had ECTP23 breaking on the [weak layer](#) a little over 1 foot deep with HS of 84.

Skies were overcast to obscured with light snowfall. 1-2" fell through the day, and light to moderate winds.

Region

Lionhead Range

Location (from list)

Lionhead Ridge

Observer Name

Alex Marienthal
